4.2 Check Status 5

1 Introduction

Starleaf Notes Studio organizes demonstration notes in a sample workspace. Follow Quick Start to create the first record, then use the operating instructions to find and export records.

1.1 Scope

This document covers record management. The example does not provide device connections, alarm handling, or certification claims.

2 Before You Begin

Open the local demonstration workspace with an authorized sample account. The demonstration organizer supplies the account; this manual contains no fixed password.

3 Quick Start

Confirm that the page displays the fictional-example label before entering data.

3.1 Create a Record

1. Open **Library** and choose **New record**.
2. Enter a record title and description, then select **Save**.

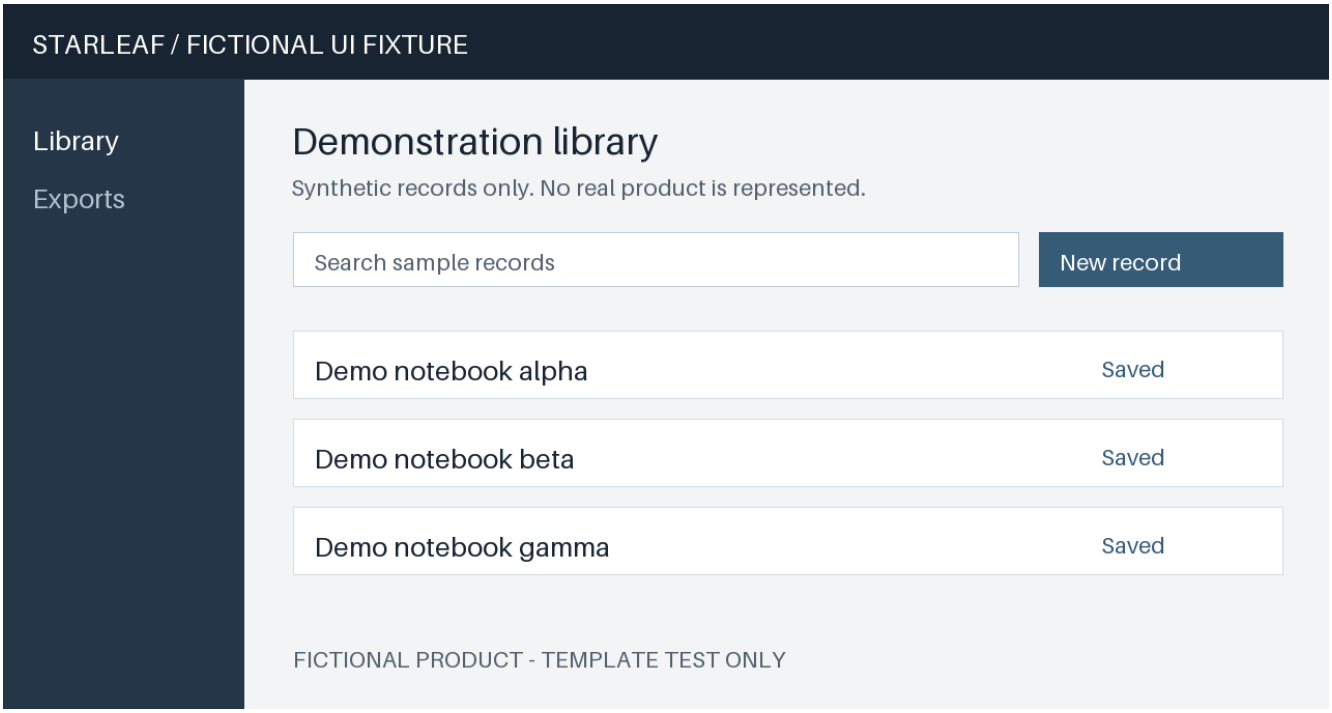

Figure 1 Fictional library interface

3. After saving, confirm that the record appears in the list. The sample list refreshes every 15 s.

4 Operating Instructions

This chapter explains recurring search, export, and status-checking tasks.

4.1 Search and Export

1. Enter a title keyword in **Search**, then select a matching record.

2. Choose **Export** to download a text copy of the current records. Each export contains at most 30 demonstration records.

Fictional example parameters

Item	Value	Notes
Demonstration record limit	120	Used only to test a capacity-value layout
List refresh interval	15 s	Tests matching values and units across languages

4.2 Check Status

If an expected record is missing, check the current filter and search again. If the list remains empty, ask the demonstration organizer to verify the sample data.
